

Android Development

In this session I learned the basics of android development and was assigned a task to make an android application which will consist of a login page capable of taking user input and displaying it over a text view. Moreover, I got to understand about the following:

- Activity: Activity in android is what we call page in a website. Activity is the current interface with which the user is interacting. An app can consist of one or more than one activity.
- Structure and files: I got to know about the structure in which files are placed in an android folder. Also learned about different types of files present in the folder and their uses.
- Working: Learned about the working of the android app. Got experience of different methods which are used to perform different types of functions.
- Errors: While working on the app I got to know about different kinds of errors and their solution which helped me to better my understanding.
